Security Clearance: Active Secret Clearance

Professional Summary

Computer Science student and U.S. Air Force Medical Logistics Technician with hands-on experience across AI training-data evaluation, secure software development, and high-accountability logistics operations. Currently an AI Specialist at Handshake AI and a cybersecurity trainee through iZen AI's Boots2Bytes program, on top of four years of military experience in technical troubleshooting, process optimization, and data analysis. Active Secret clearance. Looking for a Computer Science, cybersecurity, or software engineering role that puts that mix of discipline and technical curiosity to use.

TECHNICAL SKILLS

- Programming: C++, Java, Python
- Tools: Eclipse, GitHub, Maven, Microsoft Excel, Microsoft Project
- Operating Systems: Windows
- Concepts: Object-Oriented Programming, Input Validation, Data Structures, Secure Coding
- Technical Troubleshooting

Technical Projects

Artemis Financial Vulnerability Assessment | Java / OWASP (Academic Project)

- Conducted vulnerability assessments and identified application security risks
- Used OWASP Dependency-Check to analyze software dependencies
- Recommended secure coding improvements and mitigation strategies

Contact Service Application | Java (Academic Project)

- Developed object-oriented classes and JUnit unit tests
- Implemented input validation and CRUD functionality using in-memory data structures

gbemulator | Python (Personal Project)

- Built a Game Boy emulator from scratch: implemented the SM83 CPU instruction set, memory bus, PPU, cartridge/MBC support, and a pygame-based frontend
- Verified CPU correctness with a pytest suite covering the full instruction set, including CB-prefixed opcodes and interrupt handling

Better-curl | Python (Personal Project)

- Developed a command-line HTTP client that sends requests defined in YAML/JSON files, with structured error handling and distinct exit codes in place of raw stack traces
- Reached full test coverage of the request/response pipeline using dependency-injected I/O streams and mocked HTTP calls, with CI running the suite across three Python versions

Dashboard-bettercurl-test | Python (Personal Project)

- Built a companion suite of request definitions exercising Better-curl against the live GitHub REST API: GET/POST requests, query parameters, authenticated headers, and JSON payloads

Professional Experience

Handshake AI — Artificial Intelligence Specialist

Remote | July 2026 – Present

- Evaluate AI-generated outputs on complex coding and reasoning tasks for instruction-following and quality.
- Track recurring model failures and document them clearly enough to actually drive fixes.
- Write challenging reasoning prompts specifically to find where a model's reasoning or search capability breaks down.

iZen AI Inc. — Boots2Bytes Cybersecurity Trainee

Remote | January 2026 – Present

- Complete hands-on technical labs involving threat identification, security assessment, incident response, and risk analysis.
- Strengthen analytical problem-solving and technical documentation skills through scenario-based cybersecurity exercises.

United States Air Force — Medical Logistics Technician

Lackland Air Force Base, Texas | Feb 2022 – Present

- Managed \$25M in War Reserve Material (WRM) assets supporting Home Station Medical Response (HSMR) contingency operations and base emergency readiness.
- Provided technical support for DMLSS and assisted supply custodians to maintain uninterrupted supply operations.
- Optimized supply replenishment processes, improving availability of critical materials by 15% during high-demand periods.
- Developed WRM readiness reports and briefings for senior leadership, providing visibility on logistics performance and supply chain risks.

- Briefed upper management during operational meetings on inventory status, readiness metrics, and supply chain operations.
- Analyzed logistics data in Microsoft Excel and created PowerPoint presentations to support leadership decision-making.
- Served as primary IT support for the material flight by inventorying technical assets, troubleshooting systems, and maintaining operational readiness.
- Provided IT support for section personnel, resolving technical tickets and reducing system downtime by 25%.
- Assisted in Windows workstation updates to improve cybersecurity compliance and system performance.

Education

Southern New Hampshire University (SNHU)

Bachelor of Science — Computer Science (In Progress)

GPA: 4.0

Expected Graduation: February 2027

Certifications & Credentials

- CompTIA A+ Certification — In Progress
- Lean Six Sigma Green Belt
