Security Clearance: Active Secret

SUMMARY

Computer Science student at Southern New Hampshire University, 3.9 GPA, graduating in February 2027. Active-Duty U.S. Air Force technician. I have practical experience in Java, C++, Python, and JavaScript. I build projects end-to-end, from a hardened Spring Boot application to a JavaScript game engine written from scratch. I also have over four years of translating technical work into clear reporting for cross-functional teams. I hold an active Secret clearance.

EDUCATION

Southern New Hampshire University

Expected Feb 2027

Bachelor of Science, Computer Science | GPA: 3.9

President's List (3×) and Honor Roll (8×), 2025–2026

TECHNICAL SKILLS

Languages: Java, C++, Python, JavaScript, SQL

Web & Backend: REST APIs, Spring Boot

Tools & Practices: Git/GitHub, CI/CD, JUnit, Agile/Scrum, OWASP Dependency-Check, Eclipse, Virtual Machines

Other: Data Analysis, Technical Documentation, Cross-Functional Communication

PROJECTS

2D Platformer Game — Independent Project

- Designed and built a 2D platformer from scratch in JavaScript using the p5.js rendering library.
- Implemented custom physics, collision detection, sprite animation, and level design.
- Migrated the project from a browser-based prototype (CodePen) to a local development environment to support expanded functionality.
- The project is actively maintained as part of my portfolio.

Artemis Financial — Secure Software Engineering (Java, Spring Boot)

- Hardened a Java Spring Boot application by implementing HTTPS/TLS with SSL certificates and SHA-256 checksum verification to ensure data integrity.
- Identified and remediated dependency vulnerabilities using OWASP Dependency-Check, applying secure coding best practices throughout the development lifecycle.

Java Software Development

- Built Contact, Task, and Appointment Management systems in Java with full JUnit test coverage.
- Applied object-oriented design principles across Java and C++ applications.

Boots2Bytes Cybersecurity Training

- Completed hands-on labs in incident response, risk analysis, and threat identification.
- The labs strengthened my secure-development awareness.

Game Boy Emulator — Independent Project

- Built a Game Boy emulator from scratch in Python, implementing the SM83 CPU instruction set, memory bus, PPU, and cartridge/MBC support.
- Verified CPU correctness with a pytest suite covering the full instruction set, including CB-prefixed opcodes and interrupt handling.

Better-curl — Independent Project

- Built a command-line HTTP client that sends requests defined in YAML/JSON files, with structured error handling and distinct exit codes in place of raw stack traces.
- Reached full test coverage of the request/response pipeline using dependency-injected I/O streams and mocked HTTP calls, with CI running the suite across three Python versions.

PROFESSIONAL EXPERIENCE

United States Air Force — Medical Logistics Technician

Aug 2021 – Present

Lackland Air Force Base, TX

- Manage more than \$25M in emergency medical equipment supporting contingency operations.
- I maintain full inventory accuracy through quality assurance processes.
- Administer over \$200K in medical supply acquisitions, tracking and analyzing logistics data in Microsoft Excel.
- Provide IT support and Windows workstation troubleshooting for logistics systems.
- Prepare executive reports and readiness briefings for leadership, translating operational data into clear recommendations.

iZen AI Inc. — Boots2Bytes Cybersecurity

2026 – Present

Cybersecurity Trainee (Remote)

- Perform security assessments and analyze cyber threat scenarios as part of a defensive-security training curriculum.
- Strengthen technical documentation and analytical skills through applied lab exercises.

CERTIFICATIONS

- CompTIA Security+ (In Progress)
- Lean Six Sigma Green Belt — Training Completed
- Basic Life Support (BLS)
